28 New SAT Math Lessons To Improve Your Score In One Month - Beginner Course: For Students Currently Scoring Below 500 In SAT Math

Synopsis

This "Beginner Course" from the "28 SAT Math Lessons" series, for the revised SAT beginning March 2016, gives you all of Dr. Steve Warner's unique tips, tricks and tactics that he has developed over the last 14 years to get even the lowest scoring math students up to a 600 in SAT math. Dr. Warner has used his Ph.D. in mathematics to create the ultimate system for generating huge score increases in SAT math with only 20 minutes of preparation each day. The material in this book consists of Dr. Warner's exclusive strategies that students usually pay \$500 per hour to access during private tutoring lessons. The unique techniques Dr. Warner teaches, now available in his "Get 800" collection of books, are the most effective ever published and cannot be found in any other SAT prep book! Be careful! Some of Dr. Warner's students have shown such significant score increases that the College Board has accused them of cheating with no evidence besides their score increase from one SAT to the next. If you feel that this may happen to you after using one of Dr. Warner's books please contact him before taking your next SAT and he will tell you how to protect yourself. Beware of other books on the market that claim to be as good as Dr. Warner's. No book can be as effective as this one unless it targets students in a specific score range. Other tutors and authors, while very intelligent, often make a mistake by teaching every student how to solve problems in the same way. They do not understand the philosophy of the test and do not always know how to translate their own genius into points which would fit a specific student's needs depending on his/her math level. The "28 SAT Math Lessons" three book series is perfect for your SAT math prep for 5 reasons: Each of the 3 books in the series (Beginner, Intermediate and Advanced) targets students within a specific score range. The targeted nature of these books allows you to choose a course that is a perfect fit for you. This means that you will not waste any time practicing problems that you do not need help with. The Beginner Course is perfect if you are currently scoring below 500 on College Board practice tests. Dr. Warner has had to teach SAT math prep for 14 years to accumulate the powerful combination of insights and strategies found in this book. Years of experience and a unique approach have led to the ultimate product that outdoes any other SAT prep book. While other books teach general mathematical knowledge, Dr. Warner's strategies are designed to exploit the test's weaknesses, which allow students to save huge amounts of time, avoid careless mistakes, and answer questions correctly without any messy algebraic computations. Dr. Warner understands just how frustrating it can be for a student with a weak mathematical background to study for SAT math. The lessons in this book were designed to build confidence while simultaneously increasing mathematical skill level so that even if you have hated math your whole

life, you will no longer dread your SAT math study sessions. The information in the introduction alone is enough to raise your SAT math score up to 50 points before you even attempt one math problem. There are over 250 SAT math problems to practice with. The book naturally progresses from easier to harder problems. It starts with Level 1 and 2 problems, and then slowly focuses more on Level 2 and 3 problems as the book goes on. Explanations of the solutions are so thorough and comprehensible that even second language speakers can easily follow them. The course is designed to ensure that students are preparing in the most efficient way possible just by reading the book from cover to cover. No choices ever have to be made. The author has ensured that good preparation happens automatically with no effort on the reader's part.

Book Information

Paperback: 194 pages

Publisher: CreateSpace Independent Publishing Platform (January 11, 2016)

Customer Reviews

This SAT Math book is designed to help SAT beginners, and those who struggle with SAT Math, to learn easy strategies that will really help them gain better exam results. For students getting marks lower than 500 on their practice tests, this book will definitely boost their confidence as well as their scores. The book is written by an Associate Professor of Mathematics, who has also been tutoring SAT Math students over the past decade, so the book is filled with years of experience and knowledge in what students need to know to maximise their marks. The book starts with useful advice and hints on how to handle the SAT exam. Then each chapter begins with a revision lesson on a particular topic, (Number Theory, Algebra, Geometry, Statistics or Probability), followed by easy-to-follow strategies on the best way to handle typical SAT questions. Plenty of examples are

explained, first of all using the recommended strategy, followed by the more formal, mathematical solution. After this, plenty of exercises are provided at three levels of difficulty, again with worked solutions to help students understand the calculations. Extra drill is given at the end of each chapter to make sure that students really understand the concepts being tested. This is a great self-study book, and gives students the ability to gain confidence and improve their SAT Math scores in just one month of practice. Buying this book would definitely be money well-spent.

This book helped my daughter who struggles with Math improve her score. She said this is more about strategies to solve the problems rather than math practice. Update- score went up 100 pts and she only went through half the book.

I used this book to tutor my niece. It is very well written and organized, and does an excellent job of reviewing fundamental high school math. In addition to formal solutions, the author provides specific strategies to use to approach test problems, a practical and useful way to prepare for the test.

Very clear treatment of SAT math for the math-resistant student! Concise and non threatening, it mainly covers the easier SAT problems. I plan on purchasing the Intermediate Course shortly!

OMG, This book is like my savior!!!! I was freaking out over my awful score on the December 7th SAT, up until I someone on college confidential recommended this book to me. I thought it was going to be a huge book, but it's not. EVERYTHING IS CONCISE. I don't zone out during the lessons, and I sincerely feel like I have a shot at scoring above 600 on the SAT (that's the score I'm aiming for). It really dumbs it down for you (for lack of better term) and you just get it. It's very strategic- the book even tells you which questions per math section are best for you according to your score; EX: if you're scoring from 380-430 then the first 12 questions of the first math section on the SAT should be good for you, ETC...He gives you calculator use tips and all that jazz. Seriously, if you're getting a score below 500 on the SAT Math section then this is practically the only book on the market targeted toward you. Most books like Grubers, and the Blue Book are for the kids already achieving average scores. And those huge books can seem daunting (they did to me), but this book is only 194 pages- that's including the Authors Note in the back. I mean, I don't know what to tell you besides get this book because you'll be much happier & less stressed if you do. Believe me (or don't it's up to you) Sincerely, Person who is going to whoop the SAT in the hiney ;)
